

ASFORCLIC Mentor-mentee hybrid meeting

Mentoring is a process where mentees are given support and advice to launch a career and succeed in working life or their studies. The mentorship helps facilitate the future success of young scholars, showing benefits of more productive research careers, a more positive outlook on their prospects, better preparation in making career decisions and increased networking opportunities. Support is essential during the early stage of academic and research careers. A supportive mentor is a valuable stepping-stone for launching a successful career in academia and outside the educational sector.
